

CLAIMS

We claim:

- 1) A device which, when attached to a paintball ammunition pod, allows the user to rapidly and easily fill said paintball ammunition pod. Said device is comprised of a bowl-shaped funnel, into which said feature the user pours a quantity of paintball projectiles. Said device is further comprised of a means of attachment to a paintball ammunition pod.

- 2) Said means of attachment of the disclosed device is a self-adjusting, multi-segmented insertion neck, which allows the device to self-adjust to the various sizes of pods and provides an outward spring tension, which is sufficient to hold the device securely to the pod while it is in use. Said structure is comprised of a plurality of flexible tines, which are arranged in a radial pattern.
